IoT platform, Fathym, has acquired road weather company, WeatherCloud

Fathym has announced its acquisition of WeatherCloud. Fathym is an application-development platform focused on enabling data and Internet of Things solutions. The purchase of WeatherCloud gives Fathym a reputable road weather hardware product. When partnered with Fathym's software, it is an end-to-end road weather IoT solution.

WeatherCloud has created proprietary sensors that attach to vehicles and track road weather and vehicle data. Fathym ingests this data and provides personalized monitoring dashboards and alerting.

"It's been exciting to bring the WeatherCloud and Fathym teams together," says Fathym CEO Matthew Smith. "Their focus on affordable road weather solutions that make great impact aligns with Fathym's vision of enabling the growth of the Internet of Things."

WeatherCloud and Fathym are running pilot programs with the Colorado, Alaska, Utah and Iowa Departments of Transportation, along with commercial fleet, Averitt Express. The successful pilots have allowed the companies to develop and release a second generation of sensors and the data ingest application. They are currently expanding their customer base to include more Departments of Transportation and commercial fleets.

Find out more at Fathym.com and WeatherCloud.co.
